

High Speed Profile Sanding

Now Available From

LOEWER

Imagine not having to run your product off-line or eliminate hand sanding before staining and sealing. LOEWER's high speed profile sanding will give you a leg up on your competition with quality and overall cost savings for your customers, along with the potential to ask more money for your product than your competition does without adding labor cost.

The MultiMaster series has a Segmented Belt Brush for in-line sanding which is a new development in profile sanding. The belt brush can be made in either 150mm (~6") or 300mm (~12") widths and provides the availability to run at higher speeds such as 100fpm. Higher speeds mean the machine can easily be run in-line with moulders or finishing lines to eliminate double handling. The variable speed functions will allow for a wide range of products whether you are staining, painting or prepping — the versatility of this equipment can provide the solution!

The Löwer Belt Brush, when combined with disc and side heads, can eliminate moulder marks and provide a surface ready for staining. The same equipment can be used for sealer sanding in-line with your finishing process. Sanding grits from 60 to 600 are available for use on the belt brush along with secondary support bristles for more contact pressure if needed.

We want to test run your product and invite you to be here with us. Contact Kirk Stark @ 715-355-0712 or kirk@millspecmachine.com for more information.
